

# DRIVE SAFE SYSTEMS™: KEEPING THE ROADS SAFER FOR EVERYONE.

Con-way Freight has rolled out Drive Safe Systems™ (DSS) across its fleet of more than 8,600 trucks nationwide.

DSS is an integrated suite of advanced monitor, sense and alert systems incorporating 5 on-board technologies designed to improve situational awareness and safety. Collectively these systems, along with coaching, recognition and driver skills training, enable Con-way Freight to operate the safest equipped fleet in the industry.

## THE SAFEST EQUIPPED FLEET IN THE INDUSTRY USES 5 TECHNOLOGIES WHICH MAKE UP DRIVE SAFE SYSTEMS™:

- Event recorders
- On-board performance management
- Roll Stability Control
- Lane Departure
- Collision Avoidance

### 1. EVENT RECORDERS.

Windshield-mounted recorders capture safety-related driving events. Videos are used to coach and change unsafe behaviors before they cause an accident.

### 2. REAL-TIME ON-BOARD PERFORMANCE MANAGEMENT.

Monitors vehicle performance and helps drivers to develop best practices which improve fuel efficiency and safety.

### 3. ROLL STABILITY CONTROL.

Visually alerts the driver and automatically adjusts engine speed to stabilize the cab and trailer.

### 4. LANE DEPARTURE.

Monitors the position of a truck relative to highway lane markings and issues an audible warning alert to the driver, similar to the sound of traveling over a "rumble strip."

### 5. COLLISION AVOIDANCE.

Forward-looking radar with speed controls ensures safe distances between the truck and other vehicles.

At Con-way Freight we're driven by our number one core value, safety. We're continuously looking for ways to make the roads safer for everyone. DSS™ is our latest example of **"THE POWER OF FORWARD THINKING.™"**
